

# Healing Stages of NUE STRETCH MARK REVISION

Immediately after the procedure, the treated area will appear red and swollen. This is a normal reaction of the skin as this treatment promotes healing in order to work.

The swelling will subside but the redness will remain.

The redness will turn into brown pigmentation.

Pigmentation will start to fade.

Healed result may be visible during this period.

Once the pigmentation is gone, you are then ready for your next session.

---

THE PIGMENTATION WILL GRADUALLY FADE OVER TIME, BUT HEALING PERIOD MAY VARY BETWEEN INDIVIDUALS. WHILE SOME MAY HEAL COMPLETELY WITHIN A WEEK, OTHERS MAY TAKE LONGER. IF THE TREATED AREA REMAINS BROWN, IT INDICATES INCOMPLETE HEALING, SO PATIENCE IS ADVISED AS EVERYONE'S HEALING PROCESS IS UNIQUE.
